

INTRODUCTORY CHEMISTRY

Our distance course, Introductory Chemistry, will be of particular interest to those students wishing to enter any professional or science course for which chemistry may be a prerequisite.

The course will be especially helpful for:

- students who have little or no background in chemistry and may require chemistry in their tertiary courses.
- mature students wishing to take first-year science courses.
- students who have not completed year 13 chemistry.

The distance-taught format of this course has proven popular and is considered a successful and more convenient means of independent learning. Students do not have to attend the University of Otago.

Students who wish to may then enrol for the preparatory summer school course which specifically prepares students for the CHEM111 & CHEM191 courses.

CHEM191 is a compulsory paper for first-year Health Sciences.

Course content

The material covered is based on senior-school Chemistry. The course material will be sent to you in the form of printed notes, problem sets and a video tape. A supporting textbook is also included. Students will be expected to work through the course at their own pace. Self-tests are provided so that progress can be assessed. An assignment will form part of the course assessment.

Course fee

The course fee, paid at the time of enrolment, covers the cost of the textbook, all printed material, the videotape and postage. A refund for the textbook is available at the end of the course, providing the textbook is returned in good condition.

Enrolment

To enrol, complete the form on the next page, print it out and send it accompanied by your course fee to the below address.
